Summary

Computer Science undergraduate student at Veiga de Almeida University, with experience in software development, primarily in backend development, using Java, Spring Boot, and SQL. Experienced in developing and modernizing corporate systems, building REST APIs, automating processes, and integrating databases. Currently focusing my studies and projects on AI Engineering, particularly applications involving LLMs, RAG, MCP, and intelligent agents.

Education

Bachelor of Science in Computer Science - Veiga de Almeida University
Feb 2023 – Dec 2026 | GPA: 8.9/10
Extracurricular Activities:

- **HackingU – Veiga de Almeida University:** Member of an extracurricular study group focused on cybersecurity, participating in learning activities and technical challenges.
- **Redbone – Veiga de Almeida University:** Member of the university's robotics team, contributing to projects and participating in robotics competitions.

Professional Experience

CREA-RJ – Rio de Janeiro/RJ, Brazil
Software Development Intern – Jul 2024 – Jul 2026

- Developed and maintained 6+ corporate systems, including legacy and new applications, using Java, Spring Boot, JSP, JavaScript, Vue.js, and relational databases.
- Executed 2 WildFly upgrades (versions 9 to 24) and 3 Java upgrades (versions 8 to 21) across assigned systems, handling compatibility adjustments and application maintenance.
- Developed features and REST APIs across approximately 4 projects, using Spring Boot and Mockito to implement unit tests.
- Led a team of interns in developing a full-stack MVP for contractor management, personally handling most of the implementation, including CRUD operations, JWT authentication and refresh token flows, role-based access control, and spreadsheet management.
- Developed a Python and Selenium automation tool to create and close over 100 GLPI tickets per week in batches, using spreadsheets as data sources and eliminating repetitive manual steps in the audit process.
- Created over 50 on-demand analytical and operational reports for the Legal, Marketing, Audit, and Executive departments, using SQL and production data. Also configured Docker Compose environments from scratch for services such as WordPress, GLPI, Jenkins, Portainer, Grafana, and Graylog.
